This is a game about mystery, so we won't spoil too much in this manual.

Description:

The single player part of MirrorMoon EP blends adventure and exploration with navigation-based puzzle solving.

The multiplayer of MirrorMoon EP lets players share Galaxy Maps with other players: the first explorers to land on a planet will be able to name its Star System and that name will be forever bound to the star for any other fellow traveler who encounters it.

Each Galaxy consists of a thousand Systems: it will be possible to fully discover the mysteries of MirrorMoon EP only while collaborating with other players.

Through the apparently indecipherable cockpit of an unknown spacecraft, players will be able to locate and travel to mysterious planets. Each planet has artifacts, buildings, and puzzles on its surface, hidden in astonishing low-poly sceneries.

You are encouraged to share discoveries and theories in the forums using screens and descriptions. MirrorMoon EP is meant to be played while discussing it with other players.
